> MOLD.LOG

A browser-based generative art game. Visitors grow digital mold in a virtual Petri dish: they place spores, choose a strain, and watch the colonies branch, layer and collide as they compete for the same closed space. Each colony adds its own voice to a slowly building, polyphonic soundscape.

The image is monochrome and pixelated, like a laboratory record. The visitor can **pause** the process, **burn** the dish clean and begin again, or export any moment as a **PNG** — a unique record of one experiment. No living material is involved; the strains borrow real names and growth logics, but the work is an artistic interpretation, not a biological model.

MEDIUM	Interactive digital installation / browser game. HTML5, procedural growth simulation, generative sound.
YEAR	2026
DURATION	One growth cycle ≈ 1 min; sessions open-ended.
SETUP	Computer with a browser, monitor, mouse, small speaker at low volume. No keyboard. Installs remotely from a single link; runs offline once loaded.
PLAY	darixyz.github.io/petri-mold
SOURCE	github.com/DariyXYZ/petri-mold

> STATEMENT

I studied different types of mold in courses and encounter it constantly in everyday life. I am unsettled by the invisible world that quietly consumes what surrounds us. Digitisation and gamification are personal ways of working through that feeling: by breaking a natural process down into rules and observing it closely, I can begin to make peace with it.

Mold.log gives this method a playable form. The Petri dish becomes a contained space in which fear can turn into curiosity. The image is mediated, monochrome and available for inspection; the process can be paused, cleared and approached again. That sense of control is what lets me — and, I hope, the visitor — spend time with something we would otherwise prefer not to see.

> BIO

Darius Nazarov (b. 2002) is an artist based in Belgrade, Serbia, trained in parametric architecture. His practice spans experimental Art & Science games and media installations, using digital systems to explore natural processes and the emotions they provoke. He represents OGOxWOW Buro, an art collective bringing together several artists, and presents Mold.log as an individual author.

> EXHIBITIONS

PROJECT	YEAR	VENUE	NOTE
ExtraLives	2026	Boston Cyberarts Gallery, Boston	Playable art · Mold.log as a station
Video Game Artshow	2025–26	Another Corner	Group show of video-game art
Signal	2024	Signal festival	Media installation, festival art programme
Archstoyanie	2024	Nikola-Lenivets	Site-specific media installation
Architecton	2024	with SA Lab	Media installation
